Investment policy

UniLokata is a money market sub-fund which assets are allocated in debt instruments with low price sensitivity to changes in interest rates, i.e. short term government securities, as well as safe corporate bonds with floating interest rates based on deposits on the interbank market or those which maturity does not exceed one year.

Investor profile

The sub-fund is designated for investors who:

- expect high liquidity investment and stable profit regardless of a situation on the stock market
- are looking for an alternative to bank deposits
- want to invest financial surpluses in short-term debt securities and other money market instruments
- prefer short-term investments (maximum one year).

Dictionary

Beta to WIG – this ratio shows the relation between changes in the value of a fund unit and changes in the WIG index. Beta of 1 means that changes in the value of a fund unit are the same as changes in the WIG index. Beta below 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of the WIG index by less than 1%. Beta over 1 means that a growth (decrease) in the WIG index by 1% is usually connected with a growth (decrease) in the value of a fund unit by more than 1%.

Information ratio – this ratio shows the profitability of risk borne by the fund compared to its benchmark. The higher the information ratio, the lower the risk at which the return of the fund is generated compared to the benchmark. The fund with the information ratio over 0.3 is considered as effectively managed.

Tracking error – this ratio shows how risky the given fund is compared to its benchmark. The higher the ratio, the more aggressively is the fund managed compared to its benchmark. The ratio is used to compare the risk of funds with a similar profile (e.g. equity funds).

Standard deviation – this ratio shows how risky the given fund is. The higher the ratio, the more volatile the price of a fund unit. This ratio is used to compare the risk of funds with a similar profile (e.g. equity funds).

Duration – this ratio shows the change in the value of the debt part of the fund in reaction to a change in interest rates. The higher the duration, the bigger effect of a change in interest rates on a change in the value of a fund unit i.e. the higher the risk connected with the same.
