Investment policy

The sub-fund invests mostly in stocks of issuers from Central and Eastern Europe or stocks of issuers operating mainly in the area of Central and Eastern Europe, as well as in depositary receipts, e.g. ADR or GDR. The share of stocks and other equity securities in the sub-fund's assets will not be lower than 60%. Stocks of issuers from Central and Eastern Europe are understood as the stocks issued by issuers from such countries as Lithuania, Latvia, Estonia, Poland, Czech Republic, Slovakia, Hungary, Slovenia, Turkey, Russia, Ukraine, Macedonia, Croatia, Bosnia and Herzegovina, Serbia, Montenegro, Albania, Bulgaria, Romania, Cyprus and Kazakhstan. Investments of the sub-fund in stocks and other securities are made, above all, based on the fundamental analysis; in particular, in the case of equity securities, the basic criteria will be determination of the market and technological advantages of companies and the quality of business management.

Dictionary

Beta to benchmark – this ratio shows the relation between changes in the value of a fund unit and the benchmark. Beta of 1 means that changes in the value of a fund unit are the same as of the benchmark, which suggests that the composition of instruments in the fund is the same as the composition of instruments in the benchmark. Beta below 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of a fund unit by less than 1%. Beta over 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of a fund unit by more than 1%.

Beta to WIG – this ratio shows the relation between changes in the value of a fund unit and changes in the WIG index. Beta of 1 means that changes in the value of a fund unit are the same as changes in the WIG index. Beta below 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of the WIG index by less than 1%. Beta over 1 means that a growth (decrease) in the WIG index by 1% is usually connected with a growth (decrease) in the value of a fund unit by more than 1%.

Information ratio – this ratio shows the profitability of risk borne by the fund compared to its benchmark. The higher the information ratio, the lower the risk at which the return of the fund is generated compared to the benchmark. The fund with the information ratio over 0.3 is considered as effectively managed.

Tracking error – this ratio shows how risky the given fund is compared to its benchmark. The higher the ratio, the more aggressively is the fund managed compared to its benchmark. The ratio is used to compare the risk of funds with a similar profile (e.g. equity funds).
