Equity sub-fund

Level of risk:

■ minimal

■ low

■ moderate

✓ high

■ highest

Investment policy

The sub-fund invests primarily in the shares of issuers from Central and Eastern European countries, as well as subscription warrants, right to shares, subscription rights and deposit notes, whereby the share of equity and other securities of an equity nature in the sub-fund's assets will be no lower than 60%. The remaining assets may include other categories of investments mentioned in the statute, in particular debt securities and money market instruments. The sub-fund's investments in equities and other securities are made primarily on the basis of fundamental analysis. In particular, in case of securities of an equity nature, the main criterion is the market and technological advantages of the companies and the quality of business management.

Investor profile

The sub-fund is addressed to investors, who:

- want to benefit from dividends paid regularly by companies operating on the Central and Eastern European market.
- intend to benefit from increases on the stock market.
- plan to diversify the portfolio of funds they hold with a dividend equity sub-fund.
- are aware of the risks related to investing in stocks.

This is not a sub-fund for investors, who:

- want to receive a guaranteed profit.
- do not accept fluctuations in the value of investments in the short term.
- invest their funds in a short-term horizon.

Risk measures

| | |
|--------------------|-------|
| | 12 m |
| Beta to WIG | 0.43 |
| Standard deviation | 6.76% |

Dictionary

Beta to WIG – this ratio shows the relation between changes in the value of a fund unit and changes in the WIG index. Beta of 1 means that changes in the value of a fund unit are the same as changes in the WIG index. Beta below 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of the WIG index by less than 1%. Beta over 1 means that a growth (decrease) in the WIG index by 1% is usually connected with a growth (decrease) in the value of a fund unit by more than 1%.

Standard deviation – this ratio shows how risky the given fund is. The higher the ratio, the more volatile the price of a fund unit. This ratio is used to compare the risk of funds with a similar profile (e.g. equity funds).
